

Instructions to run the game.

here's a step-by-step guide on how to run this game in a Windows environment using Python virtualenv and installing the requirements from a requirements.txt file.

1. **Install Python** Make sure Python is installed on your system. You can download it from the [official Python website](#). During installation, check the box that says "Add Python to PATH".

2. **Install virtualenv** Open Command Prompt and install virtualenv by running the following command:

```
pip install virtualenv
```

3. **Create a virtual environment** Navigate to your project directory and create a new virtual environment. Replace env with the name you want to give to your virtual environment.

```
cd path\to\your\project
```

```
virtualenv env
```

4. **Activate the virtual environment** Activate the virtual environment using the following command:

```
\env\Scripts\activate.bat
```

Or

```
.\env\Scripts\activate
```

5. **Install the requirements** Install the requirements from the requirements.txt file using the following command:

```
pip install -r requirements.txt
```

6. **Run the game** Finally, run the game using the following command:

```
python main.py
```
